DETAILED ACTION

Drawings

1. The drawings are objected to because the view numbers are not in accordance with 37 CFR 1.84(u)(1). For example, "FIG. 2A" should replace "FIG. 2(a)". Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Specification

2. The abstract of the disclosure is objected to because it contains errors in grammar similar to those described below for the specification. Correction is required. See MPEP § 608.01(b).

3. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

4. A substitute specification in proper idiomatic English and in compliance with 37 CFR 1.52(a) and (b) is required. Phrases such as "system parameter block", "planning/formatting" (allocation?), and "host end" are not understood. The substitute specification filed must be accompanied by a statement that it contains no new matter.

Claim Objections

5. Claims 1-8 are objected to because of the following informalities: they contain the same errors of grammar and English idiom described above for the specification. For example, in claim 1, line 6, "in" is redundant and should be deleted.

Appropriate correction is required.

Claim Rejections - 35 USC § 112

6. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

7. Claims 1-8 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. For example, phrases such as "system parameter block", "planning/formatting" (allocation?), "labor manipulation" and "host end" are not understood.

Claim Rejections - 35 USC § 102

8. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

9. Claims 1-8 are rejected under 35 U.S.C. 102(b) as being anticipated by White, "How Computers Work", pp. 9-13, 23-25 and 72-76.

To the extent that the invention can be understood by the examiner in view of the informalities and rejection noted above, and in accordance with *Ex parte Ionescu*, 222 USPQ 537 (Bd. Pat. App. & Inter. 1984), the White reference is deemed to teach each of the features of the present claims.

White teaches allocating memory space on a non-volatile storage (i.e., a disk) into clusters (blocks), wherein a write always occurs to the beginning of a block (this was always the case in data processing systems until the disk got so full that space

reclamation or garbage collection became necessary). White also teaches the claimed use of BIOS and a root directory and file allocation table.

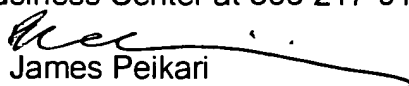

Conclusion
